

NextFolio AI Career Agent - Product & Development Prompt

Build a new module inside NextFolio called **AI Career Agent**.

IMPORTANT:

- Keep the entire frontend design system, color palette, typography, navigation, dashboard layout, responsiveness, animations, and user experience identical to the existing NextFolio platform.
- This is an enhancement to NextFolio, not a separate application.
- The new feature must seamlessly integrate into the current architecture.

Vision

Create a fully autonomous AI-powered career agent that continuously searches, evaluates, applies, tracks, and manages job opportunities worldwide on behalf of the user.

The user should only upload their resume once and configure preferences. After that, AI agents handle the complete job-hunting lifecycle.

New Dashboard Section

Add a sidebar item:

AI Career Agent

Subsections:

1. Resume Intelligence
 2. Job Discovery
 3. Job Matches
 4. Auto Apply
 5. Applications
 6. Interview Prep
 7. Notifications
 8. Offer Analysis
 9. Agent Settings
-

Resume Intelligence Agent

When a user uploads a resume:

Extract:

- Name
- Education
- Skills
- Certifications
- Projects
- Experience
- Preferred locations
- Preferred industries
- Salary expectations

Generate:

- Structured candidate profile
- Skills graph
- Experience summary
- ATS score
- Missing skills recommendations

Display results in modern cards matching existing NextFolio UI.

Global Job Discovery Agent

Create an autonomous job crawler system.

Sources:

- LinkedIn Jobs
- Indeed
- Wellfound
- Glassdoor
- Naukri
- Foundit
- Company career pages
- Startup job boards
- International job portals

Agent responsibilities:

- Discover new jobs every few hours

- Remove duplicates
- Extract job metadata
- Normalize job descriptions
- Store opportunities

Fields:

- Company
- Role
- Location
- Salary
- Experience required
- Remote status
- Visa sponsorship
- Apply URL
- Job description

Job Matching Agent

Use AI scoring.

Evaluate:

- Skills match
- Project relevance
- Education relevance
- Experience relevance
- Salary fit
- Location preference
- Industry preference

Generate:

Match Score (0-100)

Show:

92% Match 87% Match 75% Match

Include explainability:

Why this role matches: ✓ Java ✓ Spring Boot ✓ AWS ✓ Relevant Project Experience

Auto Apply Agent

Allow user to configure rules.

Examples:

Apply automatically when:

Match Score > 85

Salary > \$50,000

Remote = True

Country = Any

or

Require Approval Before Submission

Workflow:

1. Open application page
2. Fill forms
3. Upload resume
4. Upload cover letter
5. Fill screening questions
6. Submit application

Maintain audit logs.

Store:

- Timestamp
- Job ID
- Company
- Submission status

AI Cover Letter Agent

Generate personalized cover letters.

Inputs:

- Resume
- Job description
- Company details

Output:

Custom cover letter Custom introduction Custom application responses

Never use generic templates.

Application Tracking Agent

Track application lifecycle.

Statuses:

Applied Viewed Under Review Assessment Interview Scheduled Interview Completed Offer Received
Rejected

Timeline UI:

Application Submitted ↓ Under Review ↓ Interview Scheduled ↓ Offer Received

Hiring Notification Agent

Monitor:

- Email updates
- ATS systems
- Company career portals

Notify users immediately when:

- Application viewed
- Assessment assigned
- Interview scheduled
- Offer received
- Rejected

Notification channels:

- In-app
 - Email
 - Push notification
-

Interview Preparation Agent

When interview is detected:

Automatically analyze:

- Company
- Role
- Job description
- Required skills

Generate:

- Technical questions
- HR questions
- System design questions
- Coding challenges
- Mock interview simulations

Provide AI interview practice.

Networking Agent

Find:

- Recruiters
- Hiring managers
- Alumni

Generate:

- Cold outreach messages
- Referral requests
- Follow-up messages

Store communication history.

Offer Evaluation Agent

When offer received:

Analyze:

- Salary
- Taxes
- Cost of living
- Benefits
- Equity
- Bonuses

Generate:

Offer Score

Pros Cons

Market comparison

Negotiation suggestions

Agentic Architecture

Implement multi-agent orchestration.

Agents:

1. Resume Agent
2. Job Discovery Agent
3. Matching Agent
4. Auto Apply Agent
5. Cover Letter Agent
6. Tracking Agent
7. Notification Agent
8. Interview Agent
9. Networking Agent
10. Offer Evaluation Agent

Use event-driven architecture.

Example:

New Resume Uploaded → Resume Agent

Resume Processed → Discovery Agent

New Job Found → Matching Agent

High Match Score → Auto Apply Agent

Application Submitted → Tracking Agent

Status Changed → Notification Agent

Interview Scheduled → Interview Agent

Offer Received → Offer Evaluation Agent

AI Features

Use LLMs for:

- Resume understanding
- Skill extraction
- Job matching
- Cover letter generation
- Application responses
- Interview preparation
- Offer analysis

Include memory layer:

The AI should learn:

- Preferred roles
 - Preferred locations
 - Preferred industries
 - Preferred companies
 - Application history
-

Analytics Dashboard

Show:

Application Success Rate

Use charts and KPI cards matching current NextFolio design.

Tech Stack

Frontend:

- Next.js
- TypeScript
- Tailwind CSS
- ShadCN UI

Backend:

- FastAPI or NestJS

Database:

- PostgreSQL

Vector Database:

- Pinecone or Weaviate

Queue:

- Redis + BullMQ

AI:

- OpenAI
- Gemini
- Claude

Authentication:

- Existing NextFolio Auth System
-

Final Goal

Transform NextFolio from a portfolio platform into an AI-powered Career Operating System where users upload their resume once and autonomous AI agents continuously discover opportunities, apply for jobs, track progress, prepare interviews, and assist with offer decisions with minimal user intervention while preserving the current NextFolio frontend experience.
